The topological and kinematical characteristics of hadron interactions have been studied using a lead-emulsion target exposed to 2, Hadron-Nucleus Interactions - Fluka Charged hadrons, and neutral hadrons with nonzero magnetic moment, interact electromagnetically. A spinless, neutral hadron would not couple to the electromagnetic field at tree level, but the most obvious example of such a particle is the , which decays electromagnetically to two photons. Hadrons, baryons, mesons - HyperPhysics Concepts Hadrons. Particles that interact by the strong interaction are called hadrons. This general classification includes mesons and baryons but specifically excludes leptons, which do not interact by the strong force. The weak interaction acts on both hadrons and leptons.
